

Unified LC-LS Engine

Scoring System

Entry (Buy) & Exit (Sell) Decision Framework

ENTRY (Buy Decision)

Score starts from the all-time D-RSI21 trough. Scores each bar from trough onward. All entry signals are **dynamic** (live/die each bar with hysteresis).

Pool A - RSI Recovery | 40 pts | No gate

Signal	TF-RSI Check	Pts	Hysteresis
4H-RSI Inv	4H-RSI21 > 4H-RSI36 > 4H-RSI56	8	3 bars
D-RSI Inv	D-RSI21 > D-RSI36 > D-RSI56	14	3 bars
3D-RSI Inv	3D-RSI21 > 3D-RSI36 > 3D-RSI56	18	3 bars

Pool B - Price Structure | 35 pts raw | Gated by Pool A breadth

Gate AB: $\min(1.0, \text{active_A_TFs} / 2)$ - need 2 of 3 TFs inverted in Pool A. Override at 3/3 = full open.

Signal	Check	4H	D	3D
TP Flatten	TP28 range < 10% over 10 bars	2	1	1
WC Flatten	WC50 range < 10% over 10 bars	2	1	1
Price > TP	Close > TP28	3	4	6
TP > WC	TP28 > WC50	3	5	6

Raw subtotal x Gate AB = Pool B score.

Pool C - Confirmation | 25 pts raw | Gated by A+B breadth

Gate ABC: $\min(1.0, \text{total_signals_across_A_and_B} / 3)$ - need 3+ signals firing.

Signal	Check	Pts
W Divergence	Weekly bullish divergence	10
3D Divergence	3D bullish divergence	5
D-RSI21 > 60	Daily RSI above 60	5
Cross-TF Boost	2+ TFs in Pool A + Price > TP on any	5

Raw subtotal x Gate ABC = Pool C score.

Total = $\min(100, \text{Pool A} + \text{Pool B} + \text{Pool C})$

Score	Action	Position
0 - 49	DON'T ENTER	0%
50 - 69	PILOT BUY	25 - 30%

70 - 79	STANDARD ENTRY	60 - 70%
80+	FULL ENTRY	100%

EXIT (Avoid/Sell Decision)

Score starts from the all-time D-RSI21 peak. All exit signals are **binary fire-and-hold** (once fired, stay fired).

Price Gate (LS structural prerequisite) - multiplies the ENTIRE exit score. price_drop_from_peak >= 5% → min(1.0, drop_pct / 5). If price hasn't dropped 5%, total score = 0.

Pool A - RSI Breakdown | 40 pts | Price-gated

Signal	Check	Pts	Lifecycle
Spread Invert	TF-RSI21 < TF-RSI56 on any TF	28	Fire-and-hold
D-RSI21 < 40	Daily RSI below 40	12	Fire-and-hold

Pool B - Price Structure | 35 pts raw | Breadth-gated by Pool A

Gate: min(1.0, pool_A_signal_count / 2) - need 2+ Pool A signals fired.

Signal	Check	Pts	Lifecycle
Price < TP	TF-Close < TF-TP28 on any TF	25	Fire-and-hold
WC > TP (gated)	TF-WC50 > TF-TP28, only if peak D-RSI21 >= 65	10	Fire-and-hold

Pool C - Severity | 25 pts raw | Score-gated by Pool A

Gate: min(1.0, Pool_A / 25) - Pool A must reach 25+ pts.

Signal	Check	Pts	Lifecycle
D-RSI21 < 30	Daily RSI below 30	8	Fire-and-hold
Bearish Diverg	Bearish divergence on any TF	10	Fire-and-hold
Triple RSI Bear	TF-RSI21 < TF-RSI36 < TF-RSI56 on any TF	7	Fire-and-hold

Total = min(100, (Pool A + Pool B + Pool C) x Price Gate)

Score	Action
0 - 49	HOLD / MONITOR
50 - 69	REDUCE 50%
70 - 79	FULL EXIT
80+	EMERGENCY EXIT
